

# MEASURING LENGTH

## At Home Project

With a tape measurer or yard stick, measure the heights of five different people. You can measure parents, siblings, friends, or family members. You can even measure yourself. Create a project to show the heights, in order from tallest to shortest.

Your project should include:

- Each person's name and a picture of each person's face.  
(Faces can be neatly drawn, or photographed.)
- Each person's height in inches, as well as feet and inches.  
(For example, someone may be 5', 8" tall and 68" tall.

Remember 12 inches = 1 foot)

- A sheet to record your findings is attached. Turn in this sheet along with your project.

Your final project can be presented in any way that you choose. You could make a poster, a presentation on the computer, a booklet, or anything else you choose!

Your measuring project is due on \_\_\_\_\_

Categories	20 points	15 points	15 points	0 points
Completed Project	Measured 5 people and included pictures.	Measured 3-4 people and included pictures.	Measured 1-2 people and included pictures.	0 people were measured.
Measuring	Each person's measurements was given in just inches and feet & inches. Measurements were correct..	3-4 measurements were given in just inches and feet & inches. Measurements were correct..	1-2 measurements were given in just inches and feet & inches. Measurements were correct..	0 measurements were correct.
Neatness, Organization & Creativity	Project was extremely neat, organized and creative.	Project was neat, organized and creative.	Project was somewhat neat and organized, but not creative.	Project was messy, disorganized and was not creative.
Promptness	Project was turned in on time.	Project was 1-2 days late.	Project 3 or more days late.	Project not turned in.
Followed Directions	Followed all directions	Followed most directions	Followed some directions	Did not follow directions

Final Grade: \_\_\_\_\_
